Concept Document

Rocket Penguin (Team 4)

Angelina Chen | Danish Qureshi | Ryan Ong | Yizhen Wu

Liam Giraldo | Elmo Tang | Amy Li | Olivia Jiang

March 29, 2024

High Concept Statement

As the affluent monopolize scarce food resources, Rocko, a raccoon that grew up in the city's slums, opens up a charity eatery and defies the status quo. Aid Rocko in pilfering ingredients from a sumptuous yet fortified grocery store, cooking delicious meals, and feeding the hungry!

Gameplay Sketch

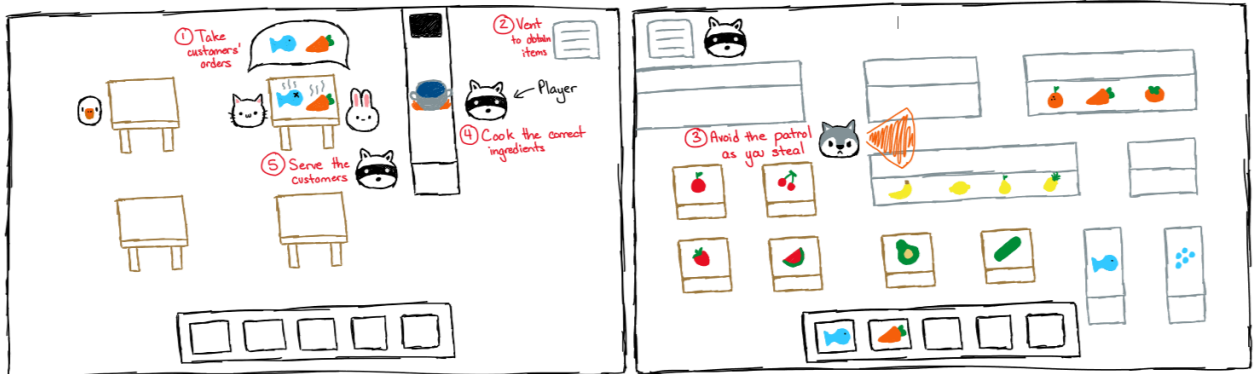

Figure 1: Gameplay Example. *The player receives the customer's order, and quickly vents into the grocery store to obtain the necessary ingredients. After skillfully avoiding the patrol, they vent back to the restaurant to cook and serve the dish.*

Features

- **Fulfill** orders, prepare meals, and accurately serve dishes
- **Evade** grocery store patrols
- **Sneak** your way through a grocery store to acquire the necessary materials
- **Juggle** your time between stealing ingredients and feeding customers

Design Goals

Le Petit Raccoon is made for the kind of player who enjoys fast-paced simulation, strategy, and management games. As the player navigates across the restaurant and the grocery store, they need to carefully balance serving and stealing to satisfy customers' cravings.

Accomplishment

As the player navigates through increasingly difficult levels, they will develop expert time management skills, balancing time spent in the restaurant and grocery store. By leveraging these skills, the player feels accomplished in keeping their restaurant afloat by promptly satisfying their customers' orders

Resourcefulness

Every second counts in this game—the player must balance their time between taking orders from new customers, going to the grocery store to pick up items, and cooking dishes to serve to customers. Strategic decision-making is key, as the player must decide what items to take, what dishes to cook, and which customers to prioritize. In addition, planning an efficient and stealthy path through the grocery store is crucial in ensuring a successful shoplifting spree.

Excitement

As the player travels stealthily through the grocery store, tension and excitement build up. *Le Petit Raccoon's* fast-paced nature fills the gameplay with moments of adrenaline-pumping action.

Market Segment

Genre

This game is a top-down stealth-simulation game intended for anyone aged 6 and up. The player takes control of Rocko, the stealthy raccoon master chef. They will aid Rocko in managing a restaurant and acquiring ingredients while avoiding getting caught by grocery store guards.

Platform

This game should be played on a PC with Windows or MacOS operating systems. The controls will be keyboard (WASD, space), as well as mouse clicks.

Competition

Overcooked: *Overcooked* is a game where multiple players complete orders by getting resources, cooking, serving, and washing dishes. *Overcooked* focuses more on multiplayer collaboration and the management of different tasks like chopping and cooking. *Le Petit Raccoon* is single-player, emphasizing a singular player's skill in managing time and tasks instead of collaboration. This aspect makes *Le Petit Raccoon* more challenging than *Overcooked*.

Papa's game series: The *Papa's* game series is a series surrounding various cooking scenarios. In the series, the player is mainly tested on their ability to cook the correct dishes, with a minor focus on interacting with their customers. In comparison, *Le Petit Raccoon* challenges the player's ability to balance between cooking and stealing instead of interacting with their customers. This makes *Le Petit Raccoon* a much more exciting and stimulating game than *Papa's* game series.

Diner Dash: *Diner Dash* is an old classic. It has restaurant-running focused gameplay that emphasizes multitasking. Our game has a more straightforward restaurant simulation, as it incorporates a new gameplay mechanic in the stealth section. In this regard, it occupies a different genre. Additionally, *Diner Dash* thematically focuses on the waiting and serving aspect of the restaurant, while our game emphasizes backend restauranteering. Moreover, *Diner Dash* limits the player's input to their mouse, whereas *Le Petit Raccoon* requires the player to use both their keyboard and mouse. This leads to our game to be more interesting as the player has free control over Rocko.

Spy Mouse: *Spy Mouse* has a comparable stealth element, with a cheeky animal player stealing food. A key difference is that *Spy Mouse* operates via a level system, with gameplay relying on set layouts and patrol patterns. Our game is more replayable due to the dynamic nature of the ingredients required. Additionally, *Spy Mouse* has only one target item per level, while the player in our game is incentivized to steal multiple items at once. This adds dynamism and strategy to our game.

Unique Selling Point

Le Petit Raccoon has a unique juxtaposition of gameplay mechanics, balancing reactive gameplay with proactive gameplay. The player will alternate between the laid-back part of serving customers and the intense part of stealing resources. As they do so, they will experience unique elements from each genre and enjoy the gameplay without requiring extensive skill. Overall, *Le Petit Raccoon* incorporates two distinct paces, allowing the player to breathe and take in the charm of the animal world, as well as to enjoy the restaurant simulation.

Replayable levels: *Le Petit Raccoon* offers a unique experience every time the same level is opened. Although the difficulty of a level remains the same, customers and orders are randomized. The score-based system encourages the player to retry levels with better skill and strategy, in attempts to break their high score. Additionally, the player is incentivized to continually adapt their strategies and paths, reacting to the AI patterns of the guards. The player could also retrieve extra resources in anticipation of new customers, or hoard certain ingredients – the possibilities are endless.

Unique Setting & Graphics: *Le Petit Raccoon* takes place in a charming and rustic, 1980s-inspired animal world! All characters, from customers to guards, are cutely stylized animals with fitting costumes and occupations. Graphics are hand-drawn, making it seem like a fantasy straight from a sketchbook. Even more, the nostalgic setting adds to the appeal with its neon lights, checkerboard tiling, and tacky clothing. It is filled with silly animations and small thematic elements, allowing The player to immerse in the wacky and wonderful world!

Information Shadowing: *Le Petit Raccoon* differs from other cooking games because of its memory element. Usually, in cooking games, information is always transparent, but this is not the case for *Le Petit Raccoon*. When transitioning to the grocery store, the player must memorize what ingredients have been ordered by customers. This adds to the multitasking gameplay, truly simulating what it's like to serve a restaurant!

Call To Action

We encourage investors to support our game at this time, with funds going into development and advertising. As a genre typically popularized by web-based platforms, we believe there is an untapped market on publishing platforms like Steam.
